

Vulnerability Assessment

Pinpoint Technical Security Weaknesses

Meeting the complicated demands in today's business environment involves a complex system of processes and reporting to protect your data and meet compliance requirements. When a risk event occurs, you will want the proper policies, procedures, and controls in place to ensure that your data is secure.

Our team of IT Risk Pros have years of specialized cybersecurity experience. We keep up-to-date with the latest technological innovations to offer you the best professional advice. We provide a wide range of vulnerability assessment services tailored to the size of your IT environment. Our complete portfolio of vulnerability assessment services includes:

Methodology

❖ Network Discovery

Scanning engine is deployed and run to identify live hosts that are currently active on your network

❖ External Vulnerability Scanning

Scanning engine is positioned outside customer network to identify vulnerabilities that can be exploited from the internet

❖ Internal Vulnerability Scanning

Scanning engine is deployed inside your network to identify vulnerabilities

❖ Asset Prioritization

Critical/High/Medium/Low/Informational risk ratings are assigned according to likelihood, impact, and severity of a vulnerability being exploited

❖ Examination

Information Security professionals with extensive knowledge of attack vectors analyze the vulnerabilities

❖ Remediation Management

Plan and track remediation efforts including patch implementation and validation scanning to align with business objectives

❖ Reporting

Develop and publish detailed patch reports, vulnerability trend, vulnerability differential and scorecard summaries to demonstrate compliance

HIGHLIGHTS

Cost Savings

Enables early detection to prevent security vulnerabilities from becoming costly expenditures

Dedicated Technical Experts

A certified CISSP reviews all reports and provides recommendations aligned with industry best practices

Simplifies Compliance Efforts

Equips your IT leadership team with a roadmap to meet statutory and mandatory compliance requirements

Visibility

Provides a vital, accurate view of security exposure in a detailed end-product report

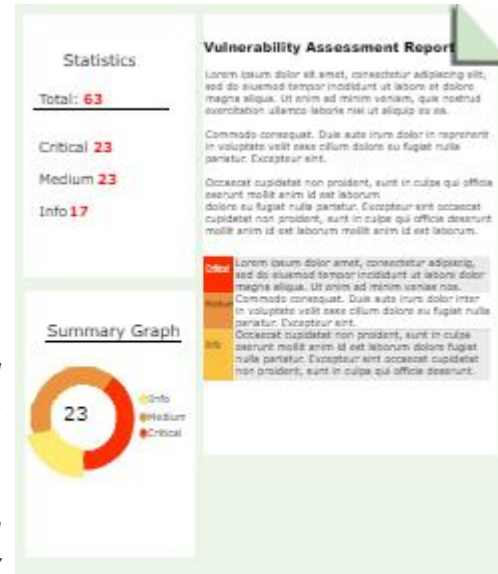

Streamlines Reporting

Rapid reporting of Security Vulnerabilities compares system configurations against standards, empowers technical staff with before-and-after snapshot of IT assets, and helps define and prioritize corrective action

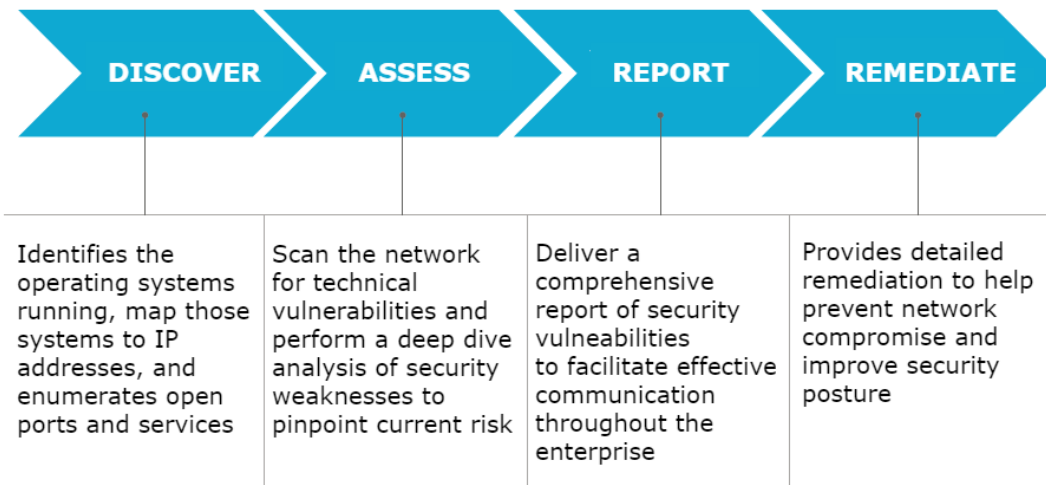

Our IT Risk Pros are technical experts who are committed to the security of your data.
We design each vulnerability assessment to meet the unique needs of each client.

Service Features

- ❖ **Comprehensive View**
Delivers a 360-degree view of network security vulnerabilities
- ❖ **Customized Recommendations**
Identifies unique threats discovered for each host
- ❖ **Accuracy**
Provides trusted, third party certification of security posture supported by thousands of unique checks using non-intrusive scanning techniques
- ❖ **Standardized Reports**
Comprehensive report of system vulnerabilities classified using standardized CVSS scores as published by National Vulnerability Database (NVD)
